"Predict, Play, Discover! "

Our Jr. KG little explorers stepped to the world of science with a hands-on Balloon Rocket Experiment! The children observed how trapped air in a balloon pushes outward, propelling our string rockets forward across the room.

Our little explorers had hands-on fun experimenting with water, leaves, keys, and blocks to learn the magic of Float & Sink! **SINK AND FLOAT**

Exploring cause & effect! Today, our Sr. KG scientists saw how soap breaks surface tension and pushes germs away!

"Magic Soap & Pepper" experiment this week! By watching black pepper flakes scatter instantly when touched by a drop of soap, the children visually discovered how soap pushes dirt and germs away.
